

#81522 & #81562 ARRMA Kraton 8S Front A-arms

Pivot Ball Holes: *RPM* A-arms come unthreaded from the factory. Threading the pivot ball holes with the pivot ball, while difficult, locks the pivot ball in place, reducing the chance they will unthread themselves. If you can't get the pivot balls to start a thread, you may use an M8 x 1.25mm tap to begin the threads. **Caution:** Thread the tap in no more than 3 or 4 turns. Allow the pivot ball to cut the remainder of the threads.
